

Adding and Editing a Page

Adding a Page

The Earthdata Wiki is comprised of parent and child pages within spaces. A parent page is the broader topic and the child pages are the more specific pages related to that topic. Each page is the child page of another. Even the "home page" of a Space is the child page of the "Space root."

- Go to the parent page or space where you would like to create a page, click **Create** in the menu bar at the top of the page.
- Select from a list of templates for the type of page you are trying to create. View [Applying a Template to a New Page](#) for more information.
- When the editing window opens, give the page a title. Place your cursor in the "New Page" text box and enter a new title for the page.

Tip

Don't use special characters in your title. The link for this page is: <https://wiki.earthdata.nasa.gov/display/UG/Add+and+edit+a+page> if it had an ampersand instead of 'and', the URL will be rendered like this: <https://wiki.earthdata.nasa.gov/pages/viewpage.action?pageId=2228303>. They will both link to the same page, but the first link is much easier for users to read and remember

- In the editing body, type in your content just as you would in Microsoft Word. You may also change the layout of the page. View [Page layout](#) for more information.
- When you are finished click **Save**.

Editing a Page

1. Navigate to the page you want to change.
2. Click **Edit**.
3. In the editing body, make your changes, just as you would in Microsoft Word.
4. When you are finished, click **Save**.

Refer to the [Quick Reference Guide for the Confluence Editor](#) for more information on editing and formatting in the editor.
